+90 505 449 9163

- Thriving in the era of big data, I am dedicated to leveraging my expertise in artificial intelligence to solve complex problems and enhance technology integration.
- Developing software solutions that enable businesses to leverage AI automation to drive growth and innovation.
- Passion for product development using new technologies with the discipline of software engineering.
- Teamwork and effective work by constantly learning new information.
- Effective communication and team collaboration for problem solving.

EXPERIENCE

AUGUST 2022 – PRESENT
SOFTWARE ENGINEER, FREELANCERS, BURSA

- Machine Learning and Deep Learning solutions according to customer requests.

Python, JavaScript, SQL, Docker, PostgreSQL, Supabase, MongoDB, RabbitMQ, PyTorch, TensorFlow, OpenCV, CUDA, Linux, Git, n8n, make.com, LLMs, NLP, LangChain, Vector Databases, AWS, Google Cloud

- Developing advanced AI-powered software systems to automate workflows for a B2B services company.
- Voice Agent systems: +30 multi-language support, 24/7 uninterrupted operation, actionable solutions created and deployed live. YouTube Video
- AI-powered voicemail, cold call and custom message features designed to reach high-quality customers with unique communication content.
- Software solutions that enable businesses to leverage AI automation to drive growth and innovation.
- Project planning and team management and teamwork leadership

* Develop and deploy applications based on Large Language Models, including specialized techniques in Retrieval-Augmented Generation (RAG)
* Custom Agents and AI Telegram Chatbots
* Automatic Dubbing Including Lip Synchronization and Voice Cloning YouTube Video
* Multilingual Text-to-Speech Solution
* Object Detection, Classification, Segmentation and Tracking
* Data Science and Visualization

JANUARY 2024 – OCTOBER 2024
AI SOLUTIONS ARCHITECT, STEALTH STARTUP, CALIFORNIA

- Collaboration with a team of top software developers to build data automation solutions for a multi-million-dollar Silicon Valley company.
- Developing Artificial Intelligence software solutions in response to customer requests.
- Customized Artificial Intelligence assistant systems.
- Development and deployment Custom AI Agents and AI Telegram Chatbots.

OCTOBER 2022 – JANUARY 2024
CO-FOUNDER, SYNCX AI**,** ANKARA

- syncX AI aims to provide a solution to the challenges of traditional dubbing processes, such as high costs, lengthy procedures, and issues like discrepancies between audio and lip movements, scene inconsistencies, as well as incongruities in body language and facial expressions, through an effective and user-friendly system for film producers and video content creators.
- Our project was awarded the seal of excellence in the challenging TÜBİTAK 1512 Entrepreneurship Support Program (BiGG). Out of 2885 applications to the TÜBİTAK BiGG fund, 153 projects were accepted. In the MVP stage, our project earned a 30 million Turkish Lira investment evaluation.
- Due to the inability to secure the necessary investment to meet the TÜBİTAK Contract terms and cover project costs, we have decided to shelve our project. Presentation

JANUARY 2021 – JULY 2022
SOFTWARE ENGINEER, INTERPROBE DEFENCE TECH., ANKARA

- To produce software solutions to current security problems with computer vision.

Python, PyTorch, TensorFlow, OpenCV, Docker, CUDA, Linux, Git, Gitlab, NVIDIA Jetson Nano, TensorRT
* Object Detection, Classification, Segmentation - Object Tracking Algorithms
* Face Detection, Recognition - Deep learning architectures such as CNNs and RNNs
* Image Enhancement – Super Resolution
* License Plate Detection and Recognition

MARCH - JULY 2020
INTERN SOFTWARE ENGINEER, ORDULU INFO TECH., ANKARA
* Real-Time Multiple Object Detection and Tracking via UAV

C++, Python, OpenCV, TensorFlow, PyTorch, Scikit-learn

JULY - OCTOBER 2019
INTERN SOFTWARE ENGINEER, ARGEDOR INFORMATION TECH., ANKARA
* Emotion Classification over Text – *Python, Keras, Scikit-learn, LSTM*
* Customer customized AI Chatbot – *Python, Rasa NLP, Linux, Git*

JULY – SEPTEMBER 2014
INFORMATION TECHNOLOGY SUMMER INTERNSHIP, ISKI BEYLIKDUZU IT, İSTANBUL
*Installation and maintenance of computers and printers in workplace use.
Performing the image operation on the Linux Pardus operating system and the necessary configuration on computers.

EDUCATION

SEPTEMBER 2023 - DROPOUT
MSC ECONOMETRICS, ULUDAG UNIVERSITY
The Master's in Econometrics (MSc) degree in Data Science, including mathematical foundations of statistics and statistical analysis, data mining, programming, data visualization, machine learning.

OCTOBER 2015 - JANUARY 2021
BSC SOFTWARE ENGINEER, FIRAT UNIVERSITY

I completed my university education by doing software projects in many different fields. The software languages and technology I use in projects are;
C, Python, C#, Matlab, JavaScript, Django, FastAPI, HTML, CSS, ASP.NET, SQL Server, Lisp, Raspberry Pi, Arduino, TensorFlow, PyTorch, Keras, Scikit-learn, OpenCV..

PROJECTS

- MULTIPLE OBJECTS DETECTION AND CLASSIFICATION IN THE UAV

I implemented the performance test by integrating multiple object tracking methods in order to increase the efficiency and success in real-time tracking of moving objects. YouTube Video (24.01.2020)
Python, OpenCV, TensorFlow, PyTorch

- DRIVER ATTENTION DETECTION SYSTEM WITH DEEP LEARNING

The aim of the project is to create a warning system by detecting real-time distraction in order to prevent accidents that occur due to driver distraction in traffic. It is aimed to reduce traffic accidents by preventing distraction with the warning system. I conducted model training using a dataset consisting of ten different situations of vehicle drivers. GitHub *Python, Keras, OpenCV, Scikit-Learn*

- EFFICIENT POLLING SYSTEM WITH DUAL AUTHENTICATION

As a team, we have realized a practical and simple solution with software engineering discipline for places where attendance tracking and input and output control are required. By identifying it with the facebank and unique Bluetooth address in the database, the output is transmitted to the server and the result is given according to the verification. The part I performed in the project, I verified the face image coming from the mobile application in real time on the Linux server, by performing face recognition from the model prepared with the face images of the people in the current list. YouTube Video
Python, OpenCV, Flask, Zeep, Raspberry Pi

- SOFTWARE DEVELOPMENT PROJECTS

- It is a program to make real estate business easy, practical and fast. Real estate used in the real estate business consists of sections such as listing, selling and renting.
  Microsoft Visual Studio C#, Microsoft SQL Server, Devexpress UI
- I developed websites. By performing search engine optimization for the website, I ensured that it appeared in the first place during the search in the targeted keywords.
  PHP, MySQL, WordPress, SEO, Html, CSS, Adobe Photoshop
- You can get the hashtag analysis, emoji distribution, and image caption output of the Instagram post you entered from the website interface separately. GitHub
